

How to install WS3600 program?

Copy AWEKAS directory on your disk (same directory name for example)

Edit Connect.ini file with notepad to change your User Name and your password

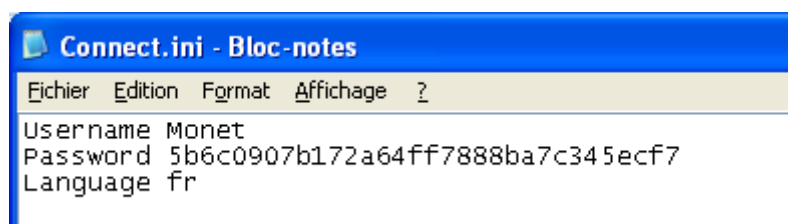

To crypt MD5 your AWEKAS Password use for example this site <http://www.iwebtool.com/md5>

After copy the result

And paste into connect.ini file like this example

Choose your language (de=german ; en=english; it = italian; fr = french ; nl = dutch)

Attention: the structure of the connect.ini file must be like this example:

username [one space] *your_user_name*

Password [one space] *your_password_encrypted_md5*

Language [one space] *your language (two letters)*

Save this connect.ini file

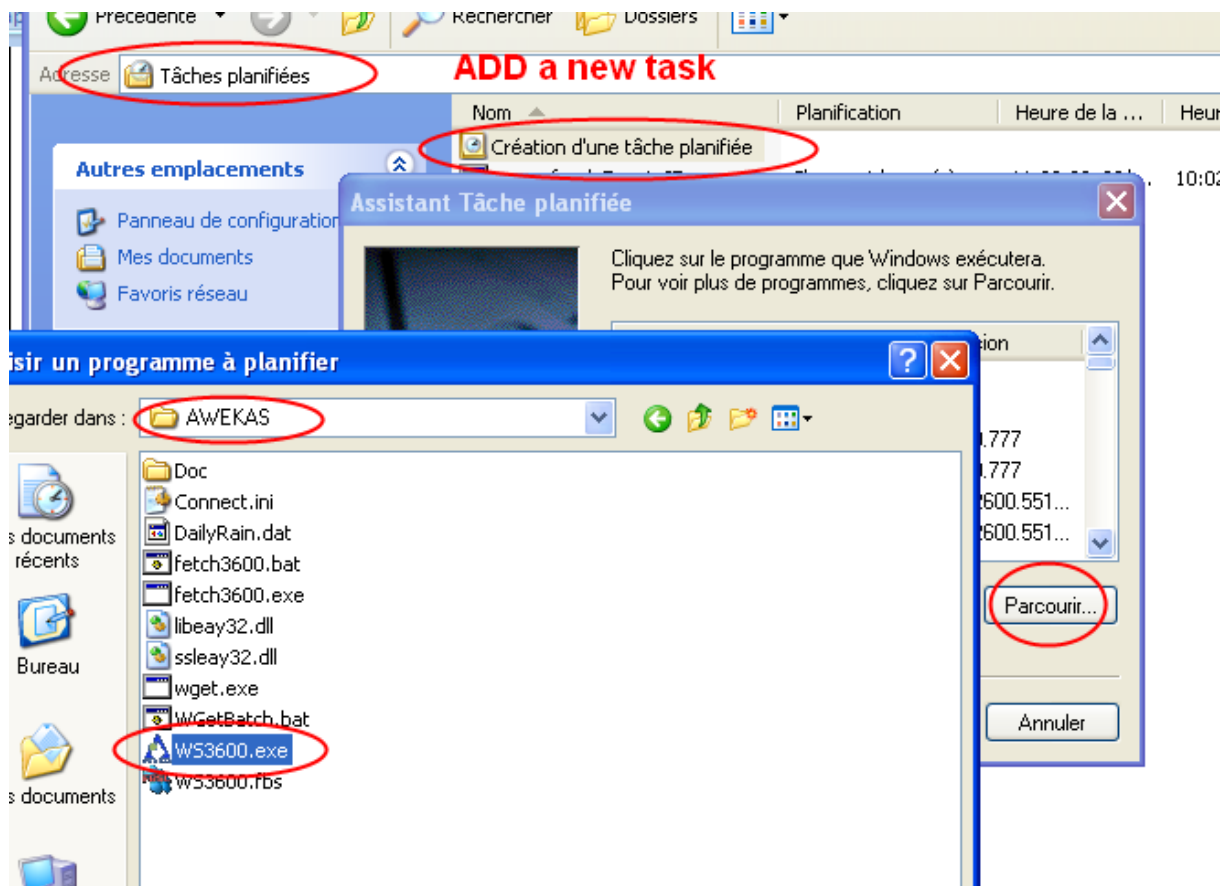

To test this application you can double-click on ws3600.exe

If it's ok, you can find xfetch3600.tmp file in application directory (=WS3600 data)

If it's ok, you can find \$AWK-xxxxx .html file in application directory (=Result of AWEKAS update)

How to manage task?

On windows clic on Start... Config ... Task manager ... to add a new task.

After you can change task parameters (Example all 10 minutes)
